

Webinar Bridge Engineering Awareness in Community

28 November 2020

Kategori	: Program Berimpak Tinggi	Sub-Kategori:	Sukarelawan/Kemasyarakatan
Peringkat	: Kebangsaan	Bahagian	: ICAEN
Pelapor	: Dr. Mohd Khairul Kamarudin		
Tempat	: Google Meet		
Penganjur	: UiTM Shah Alam (Pelajar Kelas 8C2B Kumpulan 2)		
Penglibatan/Kerjasama	: DNP Consult Sdn. Bhd & SMK Saujana Utama, Sungai Buloh		

Keterangan Program

Staf - 3, Pelajar - 7, Alumni/Industri - 1, Masyarakat - 92
Engineers In Society (ECS589) is a compulsory course in Civil Engineering Faculty, UiTM Shah Alam. Students are required to conduct a community program related to civil engineering, involving people other than UiTM community. The aim of this course is to enhance engagement of the students with the community as a prospective Civil Engineering in solving problems involving the Civil Engineering profession and also increase the understanding of the ethical and professional conduct that guide a Civil Engineer's professional practice and service to the community.

In order to comply with the objective of this course, a community project will be conducted to introduce the Civil Engineering industry and bridge structure to the students as a basic knowledge. Increasing cases of Covid-19 and execution of CMCO, many schools were closed as a preventive measure. Besides, social gathering was restricted and limited. We as a university student have to adapt to the new normal where we believe that the effective way to engage with the school students is through online platforms such as Webinar.

For this community project, we have proposed to do an online webinar and invited professional engineers to speak more about Civil Engineering and bridge structure awareness to the secondary school students. This programme is intending to focus on school students especially from science-stream class. In order to achieve a success programme, we have to commit to fulfilling the objective of delivering information and exposures relating to the Civil Engineering sector to the students. Then, this Webinar will involve FKA students as the organizer with EIS lecturer and group supervisor as mentor, the speaker from construction industry, teachers and students from chosen schools as community.
